RATIONALE

Innumerable logical and complex problems prevail in the real world which need quick and accurate solutions at low cost. The examples include: Counting number of people entering cinema hall; digital clock; playing video; phone call; transmission of document from one place to other; searching your unique ID in Aadhaar database; withdrawing money from ATM; booking railway ticket; and to check if a 25-digit number is a prime-number or not.

Inherent mapping of real-world problems to digital domain, ability of electronic circuits to process digital signals/binary signals and the support of Boolean algebra/relevant mathematical theories for simplification of circuits and reduction of time-complexity have made digital electronics the most suitable option for solving real-world problems. In fact, digital electronics can provide solutions at electronic-speed and low-cost owing to the enhancements in circuit design, fabrication technology and mass production. And the fact that the hardware of computer is digital electronic circuits elucidates the relevance of digital electronics and its learning. In this context, it is very essential to learn the basics of digital electronics to be a competent electronics professional.

1. COURSE SKILL SET

The goal of the course is to help the student to attain the following industry-need competencies through various teaching-learning processes.

- i) To understand the simple real-world logical problems and Learning to solve them through established methods.
- ii) Perform analysis, design and troubleshoot well-known simple digital circuits in practical environment.
- iii) To acquire the basic knowledge digital electronic integrated circuits and specifications.

2. INSTRUCTIONAL STRATEGY

- 1. Teachers are suggested to take measures to create interest and enhance learning confidence in students.
- 2. Teachers should give examples from daily routine/realistic/real-world as well as relate to engineering/technology applications on various concepts and principles in each topic so that students are made to understand and grasp the concepts and principles. Wherever applicable SI units are followed.
- 3. Demonstration can make the subject interesting and develop scientific temper in the students. Student activities should be planned on all the topics.
- 4. Theory - Demonstrate/practice-Activity approach may be followed throughout the course so that learning may be outcome and employability based.
- 5. All demonstrations/Hand-on practices are under simulated environment (may be followed by real environment as far as possible).

Darius was the Emperor of Persia. His empire was vast, his army was big and he himself was known for his courage and daring. Alexander had set his heart on conquering Persia.

He came to Persia marching at the head of his army which was much smaller than that of Darius. On the eve of the battle the whole valley was lit by the torches of the Persian Soldiers. Some of the Macedonian officers were dismayed. They wondered if they could defeat such a mass of humanity. They went to Alexander and advised him to attack the enemy at night. Alexander smiled and gave them the famous answer, "I will not steal a Victory".

Sometime later Alexander received a letter from Darius in which he offered to pay a huge amount of money in exchange for Persian Prisoners and give him his daughter in marriage if he promised to be his friend. Alexander told his friend Parmenio about the proposals made by Darius. "If I were Alexander, I would accept them" said Parmenio. "So would I", said Alexander "If I were Parmenio".

Questions :

- a) What were the two qualities of a warrior Darius had ?
- b) Why were the Macedonian officers dismayed ?
- c) Alexander did not like the idea of attacking the enemy at night because_____.
- d) What did the letter from Darius to Alexander contain ?
- e) What was Parmenio's advised to Alexander and how did Alexander react to that ?

Lokamanya Tilak was imprisoned by the English. He kept himself busy in studies while in jail. The jail was a quiet place, where even the birds wouldn't chirp. Tilak started putting away some food for birds while having his meals. The food was untouched in the beginning. But after some days, a few birds started coming there. Slowly their number increased and they were all around Tilak. The birds would sit on his head and shoulders fearlessly. One day a jailor came to Tilak's cell while on his rounds. On hearing the chirping of birds, he peeped in and he was totally surprised. "So many birds; where have they come from?" he asked. Tilak replied, "Friend, I didn't bring them from India. These are from here only" The jailor was surprised. He said, "everybody eats birds; hence the birds do not come here" Tilak laughed and said, "The birds can also distinguish between friends and enemies."

Question:

- a) Whom did English imprison?
- b) How did Tilk keep himself busy?
- c) Why did the birds come to the prison?
- d) Where would the birds sit when they came to the prison?
- e) Give a title for this passage.

7. SUGGESTED LIST OF STUDENT ACTIVITIES

Note: The following activities or similar activities for assessing CIE (IA) for 10 marks (Any one)

Sl. No.	Activity
1	<p>Describe the data collection activity itself (interviews, surveys, library research, etc.) AND why this specific form of data collection was chosen.</p> <p>Be sure to explain why you think this kind of data will help you in your design process.</p> <p>Also be sure to provide details about the activity: how many interviews, how long they took, where they took place, how many questions asked in a survey, how many respondents, etc.</p> <p>Present the results of your data collection.</p> <p>You do not have to have completely analyzed all your data, but do make sure you present the results of your research.</p> <p>If you did a survey, please attach a copy of the survey as an appendix; if you did interviews, please attach a copy of the interview questions.</p> <p>Discuss any preliminary analysis of your data. What have you learned thus far from the data should be discussed from an analytical perspective (rather than a data dump).</p> <p>For example, if you surveyed people about their use of the local bus system, and 90% of your respondents said they take the bus when it is raining, and 60% of your respondents said they usually wait more than 10 minutes for a bus, think about what this teaches you rather than just the information itself.</p> <p>In this instance, you can see that people are generally waiting for several minutes in the rain for bus, so a covered bus stop might be a good idea.</p> <p>Keep in mind that your findings from data should lead directly to the conclusions you make about your design recommendations.</p> <p>This is the time to begin thinking very specifically about your research in those terms. This is also an opportunity to think about your definition of “better” and how it applies to your design goals and your choice of research activities (for example, if you are choosing to make something better by making it cheaper, maybe you are interviewing people to see how much loss of functionality or decrease in features for a technology they are willing to tolerate).</p>
2	<p>https://ils.unc.edu/courses/2013spring/inls541001/Assignments.html#Assignment 9 DOWNLOAD a dataset from the above link and use data visualization tools to Analyze it.</p>
3	<p>Acquire the dataset from https://www.kaggle.com/datasets (For example acquire the data of IPL ball by ball scores and find the standard deviation and Variance of score of a batsmen) and clean the data for the root cause of the problem statement and summarize the data and explain the inference.</p>

- Different methods of teaching and media to be used to attain classroom attention.
- Massive open online courses (MOOCs) may be used to teach various topics/subtopics.
- 15-20% of the topics which are relatively simpler or descriptive in nature should be given to the students for self-learning and assess the development of competency through classroom presentations.
- Micro-projects may be given to group of students for hand-on experiences
- Encouraging students to visit sites such as Railway station and research establishment around the institution.

Method is to relate the level of PO with the number of hours devoted to the CO s which maps the given PO.

If $\geq 50\%$ of classroom sessions related to the CO are addressing a particular PO, it is considered that PO is mapped at Level 3

If 30 to 50% of classroom sessions related to the CO are addressing a particular PO, it is considered that PO is mapped at Level 2

If 5 to 30% of classroom sessions related to the CO are addressing a particular PO, it is considered that PO is mapped at Level 1

If $< 5\%$ of classroom sessions related to the CO are addressing a particular PO, it is considered that PO is considered not mapped i.e. Level 0

1. Average marks of Three CIE marks shall be considered.

MANDATORY STUDENT ACTIVITY: EACH STUDENT HAS TO SELECT ANY ONE OF THE LISTED

1. Students chose one thing to reduce at home each week and write journal entries about their successes and challenges implementing the change. In class, they form groups and create "Do You Know?" posters.
2. Students pretend they are architects and come up with a series of design changes to make their school more environmentally friendly. They then grade their projects according to a rubric.
3. A presentation for Green Team Club members to introduce themselves and the purpose of their club. They explain how to use their new recycling bins, in the classroom and in the cafeteria.
4. Ever wonder what's in your school's waste? This hands-on activity helps students assess their school's waste in order to think of ways to reduce it. The results can be incorporated into the school's recycling plan.
5. How do we measure climate change? What activities contribute to climate change?
6. Start a compost or worm bin. Composting is a hands-on way to learn about important life science concepts such as ecosystems, food webs and biodegradation. Students experience how worms and other decomposers recycle fruits and vegetable scraps into compost. Use the compost in your college garden! Have green team students make up a skit and present details about the

new composting program to all classrooms. Have them make signs for the bins (compost, recycle, and landfill), monitor the waste collection at lunchtime, cart the food waste to the compost, and decide how and where the compost will be used.

7. Paint posters and decorate bulletin boards or the doors to the cafeteria with waste-free lunch messages to announce or support a waste-free event, and have students vote for their favorite poster.
8. Conduct a classroom audit to identify waste and look for ideas to reduce and reuse. Empower the student to set goals, search for solutions and review progress.
9. Go on a field trip. Visit your local landfill, recycling centre, or a nearby composting facility where the students can see first-hand what is happening to waste and learn about the lifecycle of waste and its effect on the environment.
10. Home energy audit: Have students make a list of all the appliances and light bulbs in their house. How much energy does their house use if all the lights are on for 4 hours per day? If their appliances are on for 2 hours per day? How much energy could they save if they switched to energy-efficient appliances or light bulbs?
11. Use recycled material in art projects: Recycled materials can make beautiful art projects such as jewelry, planters, and bird houses. Incorporating materials that would otherwise be thrown away into art projects can show your students how to find new uses for these items.
12. Life cycle: One way to show students what happens when you put something in the trash versus recycling or reusing the object is to do a life cycle analysis. This is a flow chart that shows the environmental impacts of an object, from extracting the raw materials to decomposition and everything in between. When something is put in the trash instead of being reused or recycled, the life cycle assessment will show a bigger environmental impact. When something is reused or recycled, the environmental impact is less because raw materials don't need to be extracted to create something new.
